## DETAILED ACTION

(1)

## Allowable Subject Matter

Claims 1-3 and 5-9 have been found to be allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance:

Methods and apparatus for the formation of a material on a carrier substrate and transfer of that material from the carrier to a target substrate, such as taught by U.S. Patent No. 2,596,649 to Little et al. and JP 10-064574 to Kazuhiko et al., are known in the art. Little et al., for example, disclose an apparatus for the formation of a film on a substrate web via transfer from a carrier web comprising: A hot press machine that forms a joined member by heating and pressing at least one transfer substrate carrying a transferable coating thereon with a target substrate web while the coated transfer substrate and target substrate web are in contact; a cooling machine (nozzle) that cools the transfer substrate carrying the transferable coating thereon before the coating comes into contact with the target substrate web; a separating machine that separates the transfer substrate from the target substrate web; and a cooling machine that cools the joined member prior to separating the transfer substrate therefrom. With regards to methodology, Kazuhiko et al. discloses a method for manufacturing an electrolyte (solid polymer film) having a catalyst applied to at least one side thereof for use in a fuel cell comprising the steps of: Contacting a catalyst carrier surface of at least one catalyst carrier substrate, carrying a catalyst on one side thereof; forming a laminate by heating and pressing the catalyst carrier and the solid polymer film; and separating the catalyst carrier substrate from the solid polymer film having the catalyst transfer laminated thereto.

None of the prior art of record, however, specifically teaches or suggests such an apparatus or method, as set forth in applicant claims 1 and 7, respectively, wherein the apparatus utilizes a cooling machine for cooling the catalyst carrier substrate from its transfer substrate side or wherein the method utilizes a precooling step whereby a transfer substrate having a catalyst on one side thereof is cooled from the transfer side of the catalyst carrier substrate.

Application/Control Number: 09/758,241

Art Unit: 1734

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

(2)

## Response to Amendments and Arguments

The amendments and arguments filed October 31, 2003 are acknowledged. In response to the amendments to applicant claims 1-3 and 7-9, claims 1-3 and 5-9 have been indicated as allowable over the prior art of record as set forth and explained in sections (1) and (2), above.

(3)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry A. Lorengo whose telephone number is (703) 306-9172. The examiner can normally be reached on Monday through Friday, 8:30 A.M. to 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on (703) 308-3853. Please note that after December 18, 2003 the examiner can be reached at (571) 272-1233. This change is due to the relocation of Patent Office facilities to a new campus. Also note that all patent application related correspondence transmitted by FAX must be directed to the central FAX number at 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
